## Ordering and subscription information

This product, Catalogue no. 62-011-XPE, is published monthly as a standard printed publication at a price of CDN \$24.00 per issue and CDN \$233.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$72.00
Other countries	CDN \$ 10.00	CDN \$120.00

This product is also available in electronic format on the Statistics Canada Internet site as Catalogue no. 62-011-XIE at a price of CDN \$19.00 per issue and CDN \$175.00 for a one-year subscription. To obtain single issues or to subscribe, visit our Web site at [www.statcan.ca](http://www.statcan.ca), and select Products and Services.

All prices exclude sales taxes.

The printed version of this publication can be ordered by

- Phone (Canada and United States) 1 800 267-6677
- Fax (Canada and United States) 1 877 287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail Statistics Canada  
Dissemination Division  
Circulation Management  
120 Parkdale Avenue  
Ottawa, Ontario K1A 0T6
- And, in person at the Statistics Canada Reference Centre nearest you, or from authorised agents and bookstores.

When notifying us of a change in your address, please provide both old and new addresses.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136.

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

<b>Explanation of Methods Used and Additional Sources for Industrial Price Indexes</b>	61

## Highlights

Manufacturers' prices were up 0.4% in January, following an increase of 0.3% in December. Compared with January 2003, prices fell 3.6%, largely as a result of the continuing effect of a strong Canadian dollar against the US dollar.

### Declining influence of petroleum products on the IPPI continues

12-month % change

Without the dollar's influence, the Industrial Product Price Index (IPPI) would have risen 0.8% rather than falling 3.6% from a year ago.

On a monthly basis, prices for petroleum and coal products were up 5.4% from December. Primary metal products rose 2.3%, as prices continue to increase for nickel, silver, copper and lead. Lumber and other wood products were up 2.2%. Higher prices for softwood lumber and particleboard, resulting from strong demand and tight inventories, were responsible for this increase. Higher prices were also observed for chemical products (+1.6%).

Motor vehicles and other transport equipment decreased 0.9%, mainly as a result of the effect of the exchange rate. Lower prices were also observed for pulp and paper products (-1.0%), meat, fish and dairy products (-1.1%) and electrical and communication products (-0.5%).

On a 12-month basis, January represents the tenth consecutive month of decline in the IPPI. Lower prices continued for motor vehicles and other transport equipment (-11.2%), electrical and communication products (-8.0%) and pulp and paper products (-5.3%). These products remain the major contributors to the 12-month decline in the IPPI.

The petroleum and coal products group continued to have a much smaller influence on the 12-month change in the IPPI with a decrease of 5.0%. If petroleum and coal product prices had been excluded, the IPPI would have declined 3.5% on a 12-month basis.

Higher prices for primary metal products (+2.4%), lumber products (+2.4%), tobacco products (+14.2%), beverages (+2.3%) and furniture and fixtures (+1.8%) partly offset the 12-month decline.

### Higher crude oil prices continue to push up prices of raw materials

On a monthly basis, raw materials prices were up 2.4% from December. Mineral fuels were responsible for more than half of the monthly increase in the Raw Materials Price Index (RMPI), with prices rising 3.9%.

### Crude oil prices still influence the RMPI

12-month % change

Crude oil prices rose 5.1% from December as a result of low inventories and colder temperatures. Higher prices for non-ferrous metals (+4.2%), animals and animal products (+0.5%) and ferrous materials (+2.1%) also contributed to this increase.

Manufacturers paid 7.4% less for their raw materials than they did in January 2003, compared with a decrease of 5.0% in December. Mineral fuels were down 11.8% from a year ago, with crude oil prices declining 13.7%. If mineral fuels had been excluded, the RMPI would have decreased 3.5%.

Lower prices for animals and animal products (-9.5%), vegetable products (-13.1%) and wood products (-5.1%) also contributed to the 12-month drop in the RMPI.

These decreases were partly offset by higher prices for non-ferrous metals (+16.2%), non-metallic minerals (+3.4%) and ferrous materials (+1.6%).

The IPPI (1997=100) stood at 104.9 in January, up from its revised level of 104.5 in December. The RMPI (1997=100) was 115.9 in January up from its revised level of 113.2 in December.

### Impact of exchange rate

From December to January, the value of the US dollar weakened against the Canadian dollar, pushing down prices of commodities that are quoted in US dollars, notably motor vehicles, lumber products, and pulp and paper products. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.8% instead of 0.4%.

However, on a 12-month basis, the influence of the dollar is much stronger. Consequently, the IPPI excluding the effect of the exchange rate would have increased 0.8% rather than declining 3.6% from January 2003 to January 2004.

### Prices for intermediate goods continue to decrease on an annual basis

Prices for intermediate goods were up 0.9% from December. Higher prices for petroleum and coal products, lumber products, primary metal products and chemical products were the major contributors to the increase.

Lower prices for motor vehicles, meat, fish and dairy products, pulp and paper products, as well as electrical and communication products partly offset this increase.

Producers of intermediate goods received 2.2% less for their goods in January 2004 than in January 2003. Lower prices for motor vehicles, pulp and paper products, petroleum products, electrical and communication products, as well as meat, fish and dairy products were mainly responsible for the annual decline.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

### Finished goods decrease again from a year ago

On a monthly basis, prices for finished goods were down 0.2% from December. Lower prices for motor vehicles, electrical and communication products, as well as meat, fish and dairy products were partly offset by higher prices for petroleum products.

Declining prices for motor vehicles, petroleum products, electrical and communication products, machinery and equipment, as well as pulp and paper products pushed 12-month prices down 5.6% from January 2003.

These decreases were partly offset by higher prices for tobacco products, chemical products as well as furniture and fixtures.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the foods and feeds category ends up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder is bought by consumers.

### Note to readers

Effective with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada will now be used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the IPPI and RMPI are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point in time exchange rate. The estimated impact of this change is small at the total level. The month-to-month movement remains unchanged while the 12-month change is 0.1% less than it would have been had the monthly average exchange rate been used to calculate the January 2003 index.

The *Industrial Product Price Index* (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The *Raw Materials Price Index* (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor.  
The numeric descriptor is of the order ss-mm-nn-pppp-rr where  
ss indicates the S-level commodity code (from 9 to 28)  
mm indicates the M-level commodity code (from 14 to 43, 45 to 69)  
nn indicates the N-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details  
pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)  
rr indicates a split of a PCGA.

All other miscellaneous manufacturing															
v3822799	33999	2003	111.0	111.0	110.6	110.7	110.5	110.2	110.4	110.7	110.7	110.3	110.3	110.9	110.6
		2004	110.8	..	..	..	..	..	..	..	..	..	..	..	..

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

See reference document in IPPI.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Canadian Business Patterns

Profiling Corporate Canada...  
one community at a time

In the new economy where business is fueled by information, you need accurate, timely and comprehensive data to capture the complete perspective.

Nothing helps you leverage the power of information to profile Canada's business community faster, simpler or more effectively than the *Canadian Business Patterns (CBP)*.

This unique research tool provides detailed and reliable counts of business establishments by:

- nine employment size ranges
- geography groupings by province, metropolitan areas, census agglomerations, census divisions and census subdivisions
- and various levels of industry classification (SIC and NAICS).

### Make better decisions — faster!

Use the *Canadian Business Patterns* to:

- study economic activity
- conduct administrative planning
- benchmark statistical surveys
- analyse economic change
- analyse market potential
- and much, much more!

### Explore the world of business on disc

The CD-ROM *Canadian Business Patterns* provides you with the speed and reliability you need, combined with the freedom of flexibility you demand. Use the *CBP* to copy text right into your documents and databases, view data on a customized basis, and search, locate and print exactly what you are looking for.

CD-ROM Semi-annual (Cat. No. 61F0040XDB): starting from \$150

CALL 1 888 553-9993 • FAX (613) 951-6274

MAIL to Statistics Canada, Business Register Division, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, Canada.

E-MAIL [order@statcan.ca](mailto:order@statcan.ca)

### EXCLUSIVE OFFER! Buy 2 and get 40% off!

Purchase the *Canadian Business Patterns* for two reference periods and get 40% off the price of the second one!

Take advantage of this substantial saving — Order today!

### Design your data solutions to your specifications

Statistics Canada offers customized extractions from the *CBP* with your choice of geography, industry or one or more of the standard employment size ranges. We can also provide custom tabulations such as revenue-related data, non-standard geographies (e.g. enumeration areas) or your own employment size ranges starting at \$150. For more information, contact your nearest Statistics Canada regional office at 1 800 263-1136.

In Canada, please add either GST and applicable PST or HST. Shipping charges: no shipping charges for delivery in Canada. For shipments to the United States, please add \$6 per item ordered. For shipments to other countries, please add \$10 per item ordered. (Federal government clients must indicate their IS Organization Code and IS Reference Code on all orders.)

Visit our Web site at  
**[statcan.ca](http://statcan.ca)**

**Capture** the information and insight that will move your business ahead to realize its full potential. Purchase the *Canadian Business Patterns* TODAY!

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- <sup>p</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

<b>Explanation of Methods Used and Additional Sources for Industrial Price Indexes</b>	61

## Highlights

Manufacturers' prices were up 1.8% in February following an increase of 0.6% in January. Compared with February 2003, prices fell 2.5%, largely as a result of the effect of the Canadian dollar against the US dollar.

Without the dollar's influence, the Industrial Product Price Index (IPPI) would have risen 1.1% rather than falling 2.5% from February 2003.

### Petroleum product prices still influence the IPPI

12-month % change

On a monthly basis, motor vehicles and other transport equipment increased 1.8%, mainly because of the effect of the exchange rate. Lumber and other wood products were up 6.2% from January. Higher prices for softwood lumber and particleboard, resulting from strong demand, were responsible for this increase. Primary metal products rose 4.4% as prices continue to increase for copper, nickel, aluminum, and lead products. Higher prices were also observed for petroleum and coal products (+4.2%), pulp and paper products (+2.1%), as well as meat, fish and dairy products (+1.8%).

On a 12-month basis, February represents the 11th consecutive month of decline in the IPPI. Lower prices continued for motor vehicles and other transport equipment (-8.9%), electrical and communication products (-6.7%), as well as pulp and paper products (-3.5%). These products remain the major contributors to the 12-month decline in the IPPI.

The petroleum and coal products group continued to have a strong influence on the 12-month change in the IPPI with a decrease of 9.5%. If petroleum and coal product prices had been excluded, the IPPI would have declined 1.9% on a 12-month basis.

Higher prices for primary metal products (+7.3%), lumber products (+8.2%), tobacco products (+8.0%), fruit, vegetable and feed products (+1.0%), beverages (+2.8%), as well as furniture and fixtures (+1.9%), partially offset the 12-month decline.

### Higher crude oil prices continue to push up prices of raw materials

On a monthly basis, raw materials prices were up 3.4% from January. Mineral fuels were responsible for about half of the monthly increase in the Raw Materials Price Index (RMPI), with prices rising 2.8%.

Crude oil prices rose 3.4% from January as a result of tight supply and increased demand because of colder temperatures. Prices for non-ferrous metals rose 9.1% as strong demand continued for copper, lead, zinc and nickel concentrates. Animals and animal products were up 2.5% with prices for hogs for slaughter increasing 28.4%. Higher prices for vegetable products (+4.1%) and ferrous materials (+7.0%) also contributed to the monthly increase.

Manufacturers paid 7.4% less for their raw materials than they did in February 2003, compared with a decrease of 7.1% in January. Mineral fuels were down 14.4% from a year ago with crude oil prices declining 17.2%. If mineral fuels had been excluded, the RMPI would have decreased 0.9%.

### Crude oil prices continue to influence the RMPI

12-month % change

Prices for animals and animal products were down 10.3%, with cattle and calves for slaughter prices declining 32.7% from a year ago. Lower prices for vegetable products (-8.5%) and wood products (-6.1%) also contributed to the 12-month drop in the RMPI.

These decreases were partly offset by higher prices for non-ferrous metals (+26.0%), ferrous materials (+11.7%) and non-metallic minerals (+2.6%).

The IPPI (1997=100) stood at 107.0 in February, up from its revised level of 105.1 in January. The RMPI (1997=100) was 120.1 in February up from its revised level of 116.2 in January.

### Impact of exchange rate

Between January and February, the value of the US dollar strengthened against the Canadian dollar, pushing up prices of commodities that are quoted in US dollars, particularly in the case of motor vehicles, lumber products and pulp and paper products. As a result, the total IPPI excluding the effect of the exchange rate would have risen 1.1% instead of 1.8%.

However, on a 12-month basis, the Canadian dollar is much stronger. Consequently, the IPPI excluding the effect of the exchange rate would have increased 1.1% rather than declining 2.5% from February 2003 to February 2004.

### Prices for intermediate goods continue to decrease on an annual basis

Prices for intermediate goods were up 2.1% from January. Higher prices for lumber products, petroleum and coal products, primary metal products, motor vehicles and pulp and paper products were the major contributors to the increase.

Producers of intermediate goods received 0.9% less for their goods in February 2004 than in February 2003. Lower prices for petroleum products, motor vehicles, pulp and paper products, electrical and communication products and chemical products were mainly responsible for the annual decline.

These decreases were partly offset by higher prices for primary metal products and lumber products.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process (i.e., to make other goods).

### Finished goods decrease again from a year ago

On a monthly basis, prices for finished goods were up 1.3% from January. Higher prices for motor vehicles; petroleum products; meat, fish and dairy products; and electrical and communication products were responsible for this monthly rise.

Declining prices for motor vehicles, petroleum products, electrical and communication products, machinery and equipment, as well as meat, fish and dairy products pushed the 12-month prices down 4.5% from February 2003.

These decreases were partly offset by higher prices for tobacco products; fruit, vegetable and feed products; beverages; chemical products; and furniture and fixtures.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder are bought by consumers.

### Note to readers

Starting with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the Industrial Product Price Index and Raw Materials Price Index are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point-in-time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.2% more than it would have been had the monthly average exchange rate been used to calculate the February 2003 index.

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where  
 ss indicates the S-level commodity code (from 9 to 28)  
 mm indicates the M-level commodity code (from 14 to 43, 45 to 69)  
 nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details  
 pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)  
 rr indicates a split of a PCGA.

Table 3

## Industrial Product Price Indexes, by Industry and Industry Groups (1997=100) - Continued

			Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
Rendering and meat processing from carcasses															
v3822578	311614	2003	106.4	106.9	108.1	107.5	107.5	105.9	99.5	96.2	98.7	99.9	102.0	102.2	103.4
		2004	100.3	102.1	..	..	..	..	..	..	..	..	..	..	..
Poultry processing															
v3822579	311615	2003	96.7	96.7	97.1	97.0	97.5	97.5	97.8	99.5	100.5	100.6	100.4	101.7	98.6
		2004	101.6	101.7	..	..	..	..	..	..	..	..	..	..	..
Seafood product preparation and packaging															
v3822580	3117	2003	109.3	108.9	108.3	105.5	102.8	101.4	104.3	106.2	104.6	102.1	101.3	102.3	104.8
		2004	102.2	103.5	..	..	..	..	..	..	..	..	..	..	..
Bread and bakery product manufacturing															
v3822582	31181	2003	111.9	111.9	111.9	112.0	113.1	113.1	113.0	113.0	113.0	113.0	113.0	113.0	112.7
		2004	113.0	113.0	..	..	..	..	..	..	..	..	..	..	..
Cookie and cracker manufacturing															
v3822584	311821	2003	101.6	103.3	103.3	103.5	104.2	104.2	104.2	104.2	104.2	104.3	104.3	104.3	103.8
		2004	104.3	104.3	..	..	..	..	..	..	..	..	..	..	..
Flour mixes and dough manufacturing from purchased flour															
v3822585	311822	2003	105.2	105.5	106.1	106.2	107.6	107.6	107.5	107.7	107.7	107.7	107.7	107.7	107.0
		2004	107.7	107.7	..	..	..	..	..	..	..	..	..	..	..
Dry pasta and tortilla manufacturing															
v3825176	311823, 31183	2003	101.7	101.6	104.4	104.2	104.2	104.2	104.3	104.3	104.3	104.4	104.4	104.6	103.9
		2004	104.6	104.7	..	..	..	..	..	..	..	..	..	..	..
Other food manufacturing															
v3822587	3119	2003	101.0	101.2	101.8	101.9	102.0	101.8	102.0	102.2	102.3	102.2	102.1	102.3	101.9
		2004	102.3	102.3	..	..	..	..	..	..	..	..	..	..	..
Snack food manufacturing															
v3822588	31191	2003	107.6	107.7	107.7	108.1	108.1	108.0	108.0	108.0	108.1	108.1	108.0	108.1	108.0
		2004	108.1	108.1	..	..	..	..	..	..	..	..	..	..	..
Coffee and tea manufacturing															
v3822589	31192	2003	88.0	88.2	89.6	89.5	89.8	89.3	89.5	89.9	90.0	89.6	89.6	89.9	89.4
		2004	89.8	89.8	..	..	..	..	..	..	..	..	..	..	..
Miscellaneous food manufacturing															
v3822590	31193, 31194, 31199	2003	104.6	104.8	105.3	105.4	105.4	105.3	105.6	105.8	105.9	105.9	105.8	106.1	105.5
		2004	106.0	106.0	..	..	..	..	..	..	..	..	..	..	..
Beverage manufacturing															
v3822592	3121	2003	115.3	115.2	115.4	115.9	116.4	116.4	116.3	116.9	117.6	117.6	117.9	118.0	116.6
		2004	117.9	118.1	..	..	..	..	..	..	..	..	..	..	..
Soft drink and ice manufacturing															
v3822593	31211	2003	106.3	106.3	106.3	106.6	106.6	106.6	106.6	106.6	106.6	106.6	106.6	106.8	106.5
		2004	106.5	106.5	..	..	..	..	..	..	..	..	..	..	..
Breweries															
v3822594	31212	2003	125.1	125.0	125.7	126.5	128.5	128.4	128.4	129.5	130.9	130.9	131.6	131.6	128.5
		2004	131.6	131.6	..	..	..	..	..	..	..	..	..	..	..
Wineries															
v3822595	31213	2003	110.1	110.4	111.0	111.0	111.0	111.0	106.5	107.2	107.2	111.7	111.7	111.7	110.0
		2004	114.0	114.0	..	..	..	..	..	..	..	..	..	..	..
Distilleries															
v3822596	31214	2003	106.3	104.8	104.0	103.5	100.6	100.1	101.7	102.3	103.0	100.1	99.7	100.3	102.2

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ,

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

See reference document in IPPI.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

# SERVICES INDICATORS

## For and About Businesses Serving the Business of Canada ...

At last, current data and expert analysis on this VITAL sector in one publication!

The services sector now dominates the industrial economies of the world. Telecommunications, banking, advertising, computers, real estate, engineering and insurance represent an eclectic range of services on which all other economic sectors rely.

Despite their critical economic role, however, it has been hard to find out what's happening in these industries. Extensive and time-consuming efforts have, at best, provided a collection of diverse bits and pieces of information ... an incomplete basis for informed understanding and effective action.

Now, instead of this fragmented picture, *Services Indicators* brings you a cohesive whole. An innovative quarterly from Statistics Canada, this publication **breaks new ground**, providing timely updates on performance and developments in:

- *Communications*
- *Finance, Insurance and Real Estate*
- *Business Services*

*Services Indicators* brings together analytical tables, charts, graphs and commentary in a stimulating and inviting format. From a wide range of key financial indicators including profits, equity, revenues, assets and

liabilities, to trends and analysis of employment, salaries and output – PLUS a probing feature article in every issue, *Services Indicators* gives you the complete picture for the first time!

Finally, anyone with a vested interest in the services economy can go to *Services Indicators* for **current** information on these industries ... both at-a-glance and in more detail than has ever been available before – all in one unique publication.

If **your** business is serving business in Canada, or if you are involved in financing, supplying, assessing or

actually using these services, *Services Indicators* is a turning point – an opportunity to forge into the future armed with the most current insights and knowledge.

*Services Indicators* (catalogue no. 63-016-XPB) is \$125. In Canada, please add **either** GST and applicable PST **or** HST. Shipping charges: No shipping charges for delivery in Canada. For shipments to the United States, please add \$24. For shipments to other countries, please add \$40.

To order, write to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, Canada, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1 877 287-4369 or (613) 951-1584 or call 1 800 267-6677 toll-free in Canada and the United States and charge to your VISA, MasterCard or American Express. Via e-mail: [order@statcan.ca](mailto:order@statcan.ca). Visit our Web Site at [www.statcan.ca](http://www.statcan.ca).

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0° value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

<b>Explanation of Methods Used and Additional Sources for Industrial Price Indexes</b>	61

## Highlights

Manufacturers' prices were up 0.5% in March following an increase of 1.9% in February. Compared with March 2003, prices fell 1.4%, largely because of the effect of the Canadian dollar against the US dollar.

Without the dollar's influence, the Industrial Product Price Index (IPPI) would have risen 1.6% rather than falling 1.4% from March 2003.

On a monthly basis, pulp and paper products increased 1.7%, mainly as a result of strong demand for pulp and newsprint paper. Higher prices for petroleum and coal products (+1.0%), metal fabricated products (+1.6%), meat, fish and dairy products (+0.9%) and fruit, vegetable and feed products (+0.9%) also contributed to the monthly increase.

### Petroleum product prices still influence the IPPI

12-month % change

Prices for primary metal products remained unchanged from February as increases for steel, aluminum, copper, silver and lead products were offset by decreases for nickel products.

Lumber and other wood products increased slightly (+0.1%) as a result of higher prices for softwood lumber (+0.5%). Lower prices for particleboard (-1.9%) dampened the increase.

On a 12-month basis, March represents the 12th consecutive month of decline in the IPPI. Lower prices for motor vehicles and other transport equipment (-7.4%), electrical and communication products (-5.9%), chemical products (-2.8%), as well as pulp and paper products (-2.4%), were the major contributors to the 12-month decline in the IPPI.

The petroleum and coal products group continued to have a strong influence on the 12-month change in the IPPI with a decrease of 9.8%. If petroleum and coal product prices had been excluded, the IPPI would have declined 0.7% on a 12-month basis.

Higher prices for primary metal products (+10.2%), lumber products (+13.8%), metal fabricated products (+3.1%), fruit, vegetable and feed products (+2.2%) and tobacco products (+7.1%) partially offset the 12-month decline.

### Higher crude oil prices continue to push up prices of raw materials

On a monthly basis, raw materials prices were up 4.5% from February. Mineral fuels were responsible for most of the monthly increase in the Raw Materials Price Index (RMPI), with prices rising 7.1%.

Crude oil prices rose 9.1% from February as a result of lower inventories and strong demand. Prices for animal and animal products rose 3.0% with prices for cattle for slaughter increasing 7.8% and those for hogs for slaughter by 7.7%. Higher prices for non-ferrous metals (+2.3%), vegetable products (+2.8%), as well as ferrous materials (+2.3%), also contributed to the monthly increase.

### Crude oil prices continue to influence the RMPI

12-month % change

Manufacturers paid 1.4% more for their raw materials than they did in March 2003, compared with a decrease of 6.8% in February. Prices for non-ferrous metals rose 31.7% from a year ago, mainly because of higher prices for copper, lead and zinc. Ferrous materials prices rose 31.9% compared with March 2003 with iron and steel scrap prices rising a record 55.3%. Higher prices for non-metallic minerals (+2.9%) also contributed to the 12-month increase in the RMPI.

Mineral fuels were down 1.8% from a year ago with crude oil prices declining 1.4%. If mineral fuels had been excluded, the RMPI would have increased 4.3%.

Prices for animals and animal products were down 6.2%, with cattle and calves for slaughter prices declining 24.4% from a year ago. Lower prices were also observed for wood products (-3.5%) and vegetable products (-2.4%).

The IPPI (1997=100) stood at 107.7 in March, up from its revised level of 107.2 in February. The RMPI (1997=100) was 126.3 in March up from its revised level of 120.9 in February.

### Impact of exchange rate

Between February and March, the value of the US dollar against the Canadian dollar remained almost unchanged with a slight drop of 0.1%. As a result, the total IPPI excluding the effect of the exchange rate would have remained at 0.5%.

However, on a 12-month basis, the Canadian dollar is much stronger. Consequently, the IPPI excluding the effect of the exchange rate would have increased 1.6% rather than declining 1.4% from March 2003 to March 2004.

### Prices for intermediate goods increase from a year ago

Prices for intermediate goods were up 0.6% from February. Higher prices for pulp and paper products; metal fabricated products; fruit, vegetable and feed products; meat, fish and dairy products; and chemical products were the major contributors to the increase.

Producers of intermediate goods received 0.3% more for their goods in March 2004 than in March 2003. Higher prices for primary metal products, lumber products, metal fabricated products, and fruit, vegetable and feed products were mainly responsible for the annual increase.

These increases were partly offset by lower prices for petroleum products, motor vehicles, chemical products, electrical and communication products as well as pulp and paper products.

Intermediate goods, sometimes referred to as input goods, are goods that are generally bought by manufacturers to be used further on in the production process, that is, to make other goods.

### Finished goods decrease again from a year ago

On a monthly basis, prices for finished goods were up 0.3% from February. Higher prices for petroleum products; meat, fish and dairy products; chemical products; and lumber products were responsible for this monthly rise.

Declining prices for motor vehicles, petroleum products, electrical and communication products, machinery and equipment, as well as meat, fish and dairy products, pushed the 12-month prices down 3.7% from March 2003.

These decreases were partly offset by higher prices for tobacco products; fruit, vegetable and feed products; beverages; furniture and fixtures; and chemical products.

Finished goods are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder are bought by consumers.

### Note to readers

Starting with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the Industrial Product Price Index (IPPI) and Raw Materials Price Index (RMPI) are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point-in-time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.1% more than it would have been had the monthly average exchange rate been used to calculate the March 2003 index.

The **Industrial Product Price Index** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

## Industrial Product Price Indexes, by Commodity and Commodity Aggregations (1997=100) - Continued

			Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
Heating equipment, warm air, excluding ducts															
v1575428	21 52 91 0006	2003 2004	110.4 110.4	110.4 110.4	110.4 110.4	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..	110.4 ..
Fuel burning equipment															
v1575429	21 52 91 0007	2003 2004	117.9 117.9	117.9 117.9	117.9 117.9	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..	117.9 ..
Valves															
v1575430	21 52 91 0008	2003 2004	102.3 99.8	102.1 100.2	102.1 100.2	101.7 ..	100.8 ..	100.3 ..	101.0 ..	100.9 ..	100.7 ..	100.2 ..	99.9 ..	100.0 ..	101.0 ..
Pipe fittings, plumbing fixtures, metal															
v1575431	21 52 91 0009	2003 2004	150.0 151.3	150.0 151.4	151.0 161.1	150.6 ..	150.6 ..	150.6 ..	150.6 ..	150.6 ..	150.4 ..	150.4 ..	150.4 ..	151.3 ..	150.5 ..
<b>MACHINERY AND EQUIPMENT</b>															
v1575432	22	2003 2004	107.0 104.8	106.9 105.1	106.7 105.1	106.5 ..	105.9 ..	105.2 ..	105.7 ..	105.6 ..	105.5 ..	105.2 ..	104.9 ..	105.0 ..	105.8 ..
<b>Agricultural machinery</b>															
v1575433	22 53	2003 2004	113.5 108.2	113.5 108.3	113.4 108.0	113.3 ..	113.1 ..	108.9 ..	109.4 ..	109.4 ..	109.9 ..	109.8 ..	107.9 ..	108.0 ..	110.8 ..
<b>Tractors and parts</b>															
v1575434	22 53 01	2003 2004	113.4 104.1	113.4 104.2	113.2 104.2	113.0 ..	112.7 ..	105.0 ..	105.9 ..	105.9 ..	106.3 ..	106.1 ..	103.7 ..	103.7 ..	108.5 ..
Crawlers tractors and accessories															
v1575436	22 53 01 5514	2003 2004	101.0 101.4	100.6 102.2	99.7 102.2	98.9 ..	97.1 ..	96.1 ..	99.5 ..	99.4 ..	98.8 ..	97.8 ..	99.4 ..	99.6 ..	99.0 ..
<b>Other agricultural machinery</b>															
v1575439	22 53 02	2003 2004	113.6 112.2	113.6 112.2	113.7 111.5	113.5 ..	113.5 ..	112.6 ..	112.6 ..	112.7 ..	113.2 ..	113.2 ..	111.9 ..	112.0 ..	113.0 ..
Other agricultural machinery and equipment and parts															
v1575450	22 53 02 5428	2003 2004	115.7 117.0	115.7 117.0	115.7 117.0	118.2 ..	118.3 ..	117.5 ..	117.5 ..	117.5 ..	117.0 ..	117.0 ..	116.0 ..	116.0 ..	116.8 ..
Other agricultural production machinery and equipment															
v1575441	22 53 02 5414	2003 2004	113.5 114.5	113.5 114.5	113.5 114.5	113.2 ..	113.6 ..	113.0 ..	113.0 ..	113.0 ..	114.9 ..	114.9 ..	114.5 ..	114.5 ..	113.8 ..
Haying machinery, swathers, windrowers															
v1575445	22 53 02 5415	2003 2004	116.4 101.9	116.4 101.9	116.4 101.9	111.4 ..	110.7 ..	107.8 ..	107.8 ..	108.2 ..	108.2 ..	108.2 ..	101.9 ..	101.9 ..	109.6 ..
<b>Other industrial machinery</b>															
v1575451	22 54	2003 2004	106.2 104.4	106.1 104.8	105.9 104.8	105.7 ..	105.1 ..	104.7 ..	105.2 ..	105.2 ..	105.0 ..	104.7 ..	104.5 ..	104.7 ..	105.3 ..
<b>Material handling equipment</b>															
v1575454	22 54 02	2003 2004	106.5 106.4	106.4 106.5	106.5 106.6	106.4 ..	106.4 ..	106.1 ..	106.2 ..	106.1 ..	106.5 ..	106.5 ..	106.4 ..	106.4 ..	106.4 ..
Conveyors and conveying systems, including elevator and parts															
v1575455	22 54 02 5111	2003 2004	107.2 108.1	107.2 108.1	107.4 108.1	107.4 ..	107.4 ..	107.4 ..	107.4 ..	107.4 ..	108.1 ..	108.1 ..	108.1 ..	108.1 ..	107.6 ..
Hoisting machinery and parts															
v1575456	22 54 02 5131	2003 2004	106.5 104.6	106.3 104.9	106.0 104.9	105.7 ..	105.4 ..	105.0 ..	105.6 ..	105.5 ..	105.3 ..	104.9 ..	104.7 ..	104.8 ..	105.5 ..
Industrial trucks, tractors and parts															
v1575457	22 54 02 5141	2003 2004	105.5 104.5	105.4 104.5	105.4 104.5	105.4 ..	105.4 ..	104.6 ..	104.6 ..	104.6 ..	104.5 ..	104.5 ..	104.5 ..	104.5 ..	104.9 ..
Other material handling equipment and parts															
v1575458	22 54 02 5194	2003 2004	105.4 105.8	105.4 106.4	105.4 107.1	105.4 ..	105.4 ..	105.4 ..	105.4 ..	105.4 ..	105.8 ..	105.8 ..	105.8 ..	105.8 ..	105.5 ..
<b>Printing and publishing machinery and equipment</b>															
v1575459	22 54 03	2003 2004	110.1 104.5	109.9 105.0	109.2 105.0	108.7 ..	107.4 ..	106.8 ..	107.8 ..	107.7 ..	105.7 ..	105.0 ..	104.7 ..	104.8 ..	107.3 ..
<b>Metal working machinery and equipment</b>															
v1575463	22 54 04	2003 2004	108.5 107.5	108.5 107.5	108.5 106.6	108.5 ..	108.5 ..	108.5 ..	108.5 ..	108.5 ..	107.5 ..	107.5 ..	107.5 ..	107.5 ..	108.2 ..

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-r where  
 ss indicates the S-level commodity code (from 9 to 28)  
 mm indicates the M-level commodity code (from 14 to 43, 45 to 69)  
 nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details  
 pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)  
 rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \frac{\sum_i w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

See reference document in IPPI.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

# DID YOU KNOW?

## Top 5 reasons to subscribe to Internet publications

### Save money.

Order online and you'll receive a 25% price reduction from that of our print publications.

### Feel safe about ordering online.

Our secure site makes using your credit card online safe and easy. Guaranteed.

### Be the first to know.

Access our Internet publications the minute they are released—no more waiting for delivery.

### Get one price, many rewards.

Statistics Canada's online subscriptions offer unlimited access to your publication and up to three years of its previous issues.

### Be green.

By consciously choosing electronic over paper, you're doing your part to be ecologically friendly. Feel good about doing business, respecting the environment and saving precious resources.

- ✓ Statistics Canada's website has **over 175 Internet publications** in 24 theme categories to choose from.
- ✓ Statistics Canada's website [www.statcan.ca](http://www.statcan.ca) is THE place to go for the most current and accurate data on **Agriculture, Trade, Health, Education** and much, much more.
- ✓ You can **save time, money** and **avoid the hassles** of delivery. Discover the advantages of ordering online. In addition, you'll **receive a 25% price reduction** from that of our print publications.
- ✓ You can get **the latest information** regardless of location and time constraints—all you need is access to the Internet.

## Choose from some of our most popular titles such as:

- Perspectives on Labour and Income (Cat. No. 75-001-XIE)
- Canadian Social Trends (Cat. No. 11-008-XIE)
- Consumer Price Index (Cat. No. 62-001-XIB)
- Health Reports (Cat. No. 82-003-XIE)
- Infomat (Cat. No. 11-002-XIE)
- ... and many more titles.

Get right down to business with the freedom and flexibility of Statistics Canada's Internet publications.

Visit [www.statcan.ca](http://www.statcan.ca), go to our products and services and browse our Internet publications.

Our experienced Statistics Canada representatives are here to help you every step of the way. Call 1 800 263-1136 or e-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)

## Ordering and subscription information

This product, Catalogue no. 62-011-XPE, is published monthly as a standard printed publication at a price of CDN \$24.00 per issue and CDN \$233.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$72.00
Other countries	CDN \$ 10.00	CDN \$120.00

This product is also available in electronic format on the Statistics Canada Internet site as Catalogue no. 62-011-XIE at a price of CDN \$19.00 per issue and CDN \$175.00 for a one-year subscription. To obtain single issues or to subscribe, visit our Web site at [www.statcan.ca](http://www.statcan.ca), and select Products and Services.

All prices exclude sales taxes.

The printed version of this publication can be ordered by

- Phone (Canada and United States) 1 800 267-6677
- Fax (Canada and United States) 1 877 287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail Statistics Canada  
Dissemination Division  
Circulation Management  
120 Parkdale Avenue  
Ottawa, Ontario K1A 0T6
- And, in person at the Statistics Canada Reference Centre nearest you, or from authorised agents and bookstores.

When notifying us of a change in your address, please provide both old and new addresses.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136.

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

<b>Explanation of Methods Used and Additional Sources for Industrial Price Indexes</b>	<b>61</b>

## Highlights

Manufacturers' prices were up 0.8% in April following an increase of 0.6% in March. Compared with April 2003, prices rose 1.5%, the first gain in 12 months.

From a monthly perspective, prices for motor vehicles and other transport equipment increased 0.8%, mainly as a result of the effect of the exchange rate. Prices for primary metal products rose 1.7% because of increases for aluminum, nickel, iron and steel products. Lumber and other wood products increased by 2.3% as increased demand resulted in higher prices for softwood lumber (+3.9%) and particleboard (+2.0%).

### Petroleum product prices have less influence on the IPPI

12-month % change

Higher prices for pulp and paper products (+1.7%), meat, fish and dairy products (+1.1%), metal fabricated products (+1.3%), petroleum and coal products (+0.7%), chemical products (+0.5%), and fruit, vegetable and feed products (+0.6%) also contributed to the monthly increase.

Compared to April 2003, the Industrial Product Price Index (IPPI) rose 1.5%, after 12 months of decreases. Higher prices for primary metal products (+16.7%), lumber and other wood products (+18.8%), and metal fabricated products (+5.1%), as well as fruit, vegetable and feed products (+3.5%), were the major contributors to the 12-month increase in the IPPI.

The petroleum and coal products group had a weaker than usual influence on the 12-month change in the IPPI with an increase of 4.8%. If petroleum and coal product prices had been excluded, the IPPI would have increased 1.2% on a 12-month basis.

Lower prices for motor vehicles and other transport equipment (-5.2%), electrical and communication products (-4.1%), chemical products (-1.5%), pulp and paper products (-1.5%) and machinery and equipment (-1.0%) partially offset the 12-month increase.

### Raw materials prices strengthen over the year

Although raw materials prices were down 0.2% from March, manufacturers paid 8.4% more for their raw materials compared with one year ago, the largest 12-month increase since March 2003. Mineral fuels were up 12.1% from a year ago with crude oil prices rising 17.5%. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased 5.5%.

Prices for non-ferrous metals rose 38.5% from a year ago, mainly because of higher prices for copper, lead, zinc and nickel. Ferrous materials prices rose 27.0% compared with April 2003 with iron and steel scrap prices rising 45.1%. Higher prices for vegetable products (+1.4%) and non-metallic minerals (+2.4%) also contributed to the 12-month increase in the RMPI.

### Crude oil prices continue to influence the RMPI

12-month % change

Prices for animals and animal products were down 7.1%, with cattle and calves for slaughter prices declining 24.6% from a year ago. Lower prices were also observed for wood products (-2.1%).

On a monthly basis, ferrous materials were down 6.0%, as a result of lower prices for iron and steel scrap (-9.1%). Prices for animal and animal products declined 1.2% mainly because of lower prices for hogs for slaughter (-5.8%). Lower prices for non-ferrous metals (-0.3%) also contributed to the monthly decrease in the RMPI.

Mineral fuels increased 0.3% compared with March, with prices for crude oil rising 0.4% as tight supplies continue. Higher prices were also observed for vegetable products (+2.3%) and wood products (+0.2%).

The IPPI (1997=100) stood at 108.8 in April, up from its revised level of 107.9 in March. The RMPI (1997=100) was 125.9 in April, down slightly from its revised level of 126.1 in March.

### Impact of exchange rate

Between March and April, the value of the US dollar strengthened against the Canadian dollar with an increase of 1.1%. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.5%.

However, on a 12-month basis, the Canadian dollar is much stronger. Consequently, excluding the effect of the exchange rate, the IPPI would have increased 3.6% rather than increasing 1.5% from April 2003 to April 2004.

### Prices for intermediate goods increase from a year ago

Prices for intermediate goods were up 1.1% from March. Higher prices for lumber products; primary metal products; pulp and paper products; metal fabricated products; meat, fish and dairy products; fruit, vegetable and feed products; and chemical products were the major contributors to the increase.

Producers of intermediate goods received 3.8% more for their goods in April 2004 than in April 2003. Higher prices for primary metal products; lumber products; metal fabricated products; petroleum products; and fruit, vegetable and feed products were mainly responsible for the annual increase.

These increases were partly offset by lower prices for motor vehicles, pulp and paper products, chemical products, and electrical and communication products.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

### Finished goods decrease again from a year ago

On a monthly basis, prices for finished goods were up 0.6% from March. Higher prices for motor vehicles, petroleum products, meat, fish and dairy products; and lumber products were responsible for this monthly rise.

Declining prices for motor vehicles; electrical and communication products; machinery and equipment; and pulp and paper products pushed the 12-month prices down 1.9% from April 2003.

These decreases were partly offset by higher prices for petroleum products; fruit, vegetable and feed products; beverages; tobacco products; furniture and fixtures; and chemical products.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder are bought by consumers.

### Note to readers

Effective with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the IPPI and RMPI are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point-in-time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.2% more than it would have been had the monthly average exchange rate been used to calculate the April 2003 index.

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
- ss indicates the S-level commodity code (from 9 to 28)
  - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
  - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
  - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
  - rr indicates a split of a PCGA.

Table 3

## Industrial Product Price Indexes, by Industry and Industry Groups (1997=100)

		Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
<b>ALL MANUFACTURING</b>

Table 3

## Industrial Product Price Indexes, by Industry and Industry Groups (1997=100) - Continued

			Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
Rendering and meat processing from carcasses															
v3822578	311614	2003	106.4	106.9	108.1	107.5	107.5	105.9	99.5	96.2	98.7	99.9	102.1	102.4	103.4
		2004	100.5	102.3	104.0	106.2	..	..	..	..	..	..	..	..	..
Poultry processing															
v3822579	311615	2003	96.7	96.7	97.1	97.0	97.5	97.5	97.8	99.5	100.5	100.6	100.4	101.7	98.6
		2004	101.6	101.7	101.7	101.8	..	..	..	..	..	..	..	..	..
Seafood product preparation and packaging															
v3822580	3117	2003	109.3	108.9	108.3	105.5	102.8	101.4	104.3	106.2	104.6	102.1	101.3	102.3	104.8
		2004	102.3	103.6	102.7	102.7	..	..	..	..	..	..	..	..	..
Bread and bakery product manufacturing															
v3822582	31181	2003	111.9	111.9	111.9	112.0	113.1	113.1	113.0	113.0	113.5	113.5	113.5	113.5	112.8
		2004	113.7	113.7	113.7	113.7	..	..	..	..	..	..	..	..	..
Cookie and cracker manufacturing															
v3822584	311821	2003	101.6	103.3	103.3	103.5	104.2	104.2	104.2	104.2	104.3	104.4	104.4	104.4	103.8
		2004	104.4	104.4	104.4	104.4	..	..	..	..	..	..	..	..	..
Flour mixes and dough manufacturing from purchased flour															
v3822585	311822	2003	105.2	105.5	106.1	106.2	107.6	107.6	107.5	107.7	108.4	108.4	108.4	108.4	107.3
		2004	108.7	108.7	108.7	108.7	..	..	..	..	..	..	..	..	..
Dry pasta and tortilla manufacturing															
v3825176	311823, 31183	2003	101.7	101.6	104.4	104.2	104.2	104.2	104.3	104.3	104.3	104.4	104.4	104.6	103.9
		2004	104.6	104.7	104.7	104.7	..	..	..	..	..	..	..	..	..
Other food manufacturing															
v3822587	3119	2003	101.0	101.2	101.8	101.9	102.0	101.8	102.0	102.2	102.5	102.4	102.3	102.5	102.0
		2004	102.5	102.6	102.7	102.7	..	..	..	..	..	..	..	..	..
Snack food manufacturing															
v3822588	31191	2003	107.6	107.7	107.7	108.1	108.1	108.0	108.0	108.0	108.6	108.6	108.6	108.6	108.1
		2004	108.6	108.6	109.1	109.1	..	..	..	..	..	..	..	..	..
Coffee and tea manufacturing

Doll, toy and game manufacturing														
v3822796	33993	2003 107.9	108.1	108.1	108.1	108.1	108.1	108.1	108.1	108.1	108.1	108.1	108.1	108.1
		2004 108.1	108.2	108.2	108.2	..	..	..	..	..	..	..	..	..
All other miscellaneous manufacturing														
v3822799	33999	2003 111.0	111.0	110.6	110.7	110.5	110.2	110.4	110.7	110.7	110.2	110.3	110.8	110.6
		2004 111.2	111.6	111.5	111.7	..	..	..	..	..	..	..	..	..

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

See reference document in IPPI.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

# Canada: A Portrait

*Canada: A Portrait* is a handsomely produced book capturing all the beauty and complexity of Canada—its social, economic and cultural life.

Combining spectacular photographs with entertaining and educational text, *Canada: A Portrait* allows us a very rare and human look at the stories behind the numbers—the experiences, issues, art and poetry that bind us together as a nation and a people.

## Every issue includes:

- ▶ durable hard cover format
- ▶ striking dust jacket
- ▶ convenient size: 27.8 cm x 27.2 cm (11 in. x 10 ¾ in.)
- ▶ 6 chapters – 216 pages
- ▶ 80 illustrations
- ▶ detailed index and bibliography
- ▶ separate English and French editions

Treat yourself. Offer it to loved ones. Give it to your friends. Use it to reward colleagues and to thank clients.

**Extensive photographs and thought provoking text make turning every page an adventure!**

## What's Inside

This collector-quality edition depicts the story of a nation in six chapters: The Land, The People, The Society, Arts and Leisure, The Economy and Canada and the World.

Each chapter is prefaced with the voices of authors, poets and other highly accomplished individuals such as John Kenneth Galbraith, Zacharias Kunuk, Nicole Brossard, Gordon Pinsent, Guy Vanderhaeghe and Rick Mercer.

## Ordering and subscription information

This product, Catalogue no. 62-011-XPE, is published monthly as a standard printed publication at a price of CDN \$24.00 per issue and CDN \$233.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$72.00
Other countries	CDN \$ 10.00	CDN \$120.00

This product is also available in electronic format on the Statistics Canada Internet site as Catalogue no. 62-011-XIE at a price of CDN \$19.00 per issue and CDN \$175.00 for a one-year subscription. To obtain single issues or to subscribe, visit our Web site at [www.statcan.ca](http://www.statcan.ca), and select Products and Services.

All prices exclude sales taxes.

The printed version of this publication can be ordered by

- Phone (Canada and United States) 1 800 267-6677
- Fax (Canada and United States) 1 877 287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail Statistics Canada  
Dissemination Division  
Circulation Management  
120 Parkdale Avenue  
Ottawa, Ontario K1A 0T6
- And, in person at the Statistics Canada Reference Centre nearest you, or from authorised agents and bookstores.

When notifying us of a change in your address, please provide both old and new addresses.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136.

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0° value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

## Highlights

Manufacturers' prices were up 1.5% in May following an increase of 1.0% in April. On a 12-month basis, prices rose 5.5%, the largest increase since October 1995.

### Petroleum product prices still influence the IPPI

12-month % change

From a monthly perspective, higher prices for petroleum and coal products (+9.9%) contributed to about half of the monthly increase. Prices for motor vehicles and other transport equipment increased 1.8%, mainly as a result of the effect of the exchange rate. Lumber and other wood products increased by 2.0% as lower inventories and strong construction activity resulted in higher prices for softwood lumber (+6.0%).

Higher prices for chemical products (+1.6%), pulp and paper products (+1.3%), meat, fish and dairy products (+1.3%) as well as electrical and communication products (+1.0%) also contributed to the monthly increase.

Prices for primary metal products declined 1.9% due to decreases for nickel, copper and aluminum products.

Compared to May 2003, the Industrial Product Price Index (IPPI) rose 5.5%. The petroleum and coal products group had a strong influence on the 12-month change in the IPPI with an increase of 26.5%, the largest since March 2003. If petroleum and coal product prices had been excluded, the IPPI would have increased 4.0% on a 12-month basis.

Higher prices for lumber and other wood products (+27.1%), primary metal products (+17.1%), metal fabricated products (+6.9%), pulp and paper products (+2.6%), fruit, vegetable and feed products (+3.1%), meat, fish and dairy products

(+2.3%) as well as chemical products (+1.8%) also contributed to the 12-month increase in the IPPI.

### Raw materials prices continue to strengthen compared with a year ago

On a monthly basis, raw materials prices were up 2.9% in May, following a decrease of 0.4% in April. Mineral fuels were responsible for the most part with an increase of 6.2%. Crude oil prices rose 7.8% due to strong demand and tight inventories.

Prices for animal and animal products rose 4.1%, mainly the result of higher prices for hogs for slaughter (+28.7%). Higher prices were also observed for wood products (+0.4%) as well as non-metallic mineral products (+0.2%).

### Crude oil prices continue to influence the RMPI

12-month % change

Non-ferrous metals were down 2.9% as a result of lower prices for copper and nickel concentrates, silver and gold. Vegetable products decreased by 2.7% as prices for soybeans (-16.3%) and canola (-6.8%) declined due to lower demand. Lower prices were also observed for ferrous materials (-2.6%).

Manufacturers paid 15.0% more for their raw materials compared to one year ago, the largest 12-month increase since February 2003. Mineral fuels were up 25.6% from a year ago with crude oil prices rising 33.2%. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased 7.0%.

Prices for non-ferrous metals rose 31.7% from a year ago, mainly because of higher prices for copper, lead, zinc, nickel, gold and silver. Ferrous materials prices rose 26.6%

compared to May 2003 with iron and steel scrap prices rising 38.2%.

Higher prices for vegetable products (+2.8%), wood products (+1.8%) and non-metallic minerals (+2.5%) also contributed to the 12-month increase in the RMPI.

Prices for animals and animal products were down 2.6%, with cattle and calves for slaughter prices declining 25.6% from a year ago.

The IPPI (1997=100) stood at 110.8 in May, up from its revised level of 109.2 in April. The RMPI (1997=100) was 129.2 in May, up from its revised level of 125.6 in April.

### Impact of exchange rate

Between April and May, the value of the U.S. dollar strengthened against the Canadian dollar with an increase of 2.7%. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.7%, compared to the 1.5% actual increase.

However, on a 12-month basis, the influence of the dollar had no impact. The change in IPPI excluding the effect of the exchange rate was 5.5% from May 2003 to May 2004.

### Prices for intermediate goods increase from a year ago

Prices for intermediate goods were up 1.2% from April. Higher prices for petroleum products, lumber products, chemical products, pulp and paper products, motor vehicles and meat, fish and dairy products were the major contributors to the increase.

Lower prices for primary metal products as well as fruit, vegetable and feed products partly offset the monthly gain.

Producers of intermediate goods received 7.8% more for their goods in May 2004 than in May 2003. Higher prices for lumber products, primary metal products, petroleum products, metal fabricated products, pulp and paper products, fruit, vegetable and feed products and chemical products were mainly responsible for the annual increase.

These increases were partly offset by lower prices for rubber, leather and plastic products, textile products and beverages.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

### Finished goods increase from a year ago

On a monthly basis, prices for finished goods were up 1.8% from April. Higher prices for petroleum products; motor vehicles; electrical and communication products; meat, fish and dairy products; fruit, vegetable and feed products; and beverages were responsible for this monthly rise.

Higher prices for petroleum products; fruit, vegetable and feed products; beverages; meat, fish and dairy products; electrical and communication products; chemical products; and furniture and fixtures pushed the 12-month prices up 2.3% from May 2003.

These increases were partly offset by declining prices for motor vehicles, pulp and paper products and machinery and equipment.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder are bought by consumers.

### Note to readers

Effective with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the IPPI and RMPI are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point in time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.2% more than it would have been had the monthly average exchange rate been used to calculate the May 2003 index.

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its U.S. counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
- ss indicates the S-level commodity code (from 9 to 28)
  - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
  - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
  - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
  - rr indicates a split of a PCGA.

Table 3

## Industrial Product Price Indexes, by Industry and Industry Groups (1997=100) - Continued

			Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
Cement manufacturing															
v3822690	32731	2003	114.7	115.0	114.9	114.8	114.9	114.8	114.8	114.9	114.9	114.9	114.3	114.9	114.8
		2004	117.0	116.7	117.7	117.8	117.8	..	..	..	..	..	..	..	..
Ready-mix concrete manufacturing															
v3822691	32732	2003	111.6	111.9	110.0	110.5	110.4	110.3	110.5	110.6	110.6	110.3	110.3	110.4	110.6
		2004	112.6	112.7	112.6	112.5	112.5	..	..	..	..	..	..	..	..
Concrete product manufacturing															
v3822692	32733, 32739	2003	109.0	109.1	109.5	109.7	109.5	109.5	109.5	109.6	109.5	109.5	109.5	109.5	109.5
		2004	112.2	112.2	112.2	112.2	112.2	..	..	..	..	..	..	..	..
Other non-metallic mineral product manufacturing															
v3822694	3279	2003	109.9	112.1	111.6	111.5	111.2	110.9	111.0	110.9	110.9	110.9	110.9	111.0	111.1
		2004	111.1	111.3	111.2	111.3	111.4	..	..	..	..	..	..	..	..
Primary metal manufacturing															
v3822695	331	2003	99.0	99.7	98.2	95.4	94.0	92.3	94.4	95.0	95.3	96.1	97.6	100.1	96.4
		2004	103.5	109.2	110.6	113.0	111.1	..	..	..	..	..	..	..	..
Iron and steel mills and ferro-alloy manufacturing															
v3822696	3311	2003	98.2	97.9	97.5	96.1	95.0	93.3	92.9	93.1	93.3	93.8	94.2	94.1	95.0
		2004	97.1	101.3	107.8	111.4	113.5	..	..	..	..	..	..	..	..
Iron and steel pipes and tubes manufacturing from purchased steel															
v3822698	33121	2003	98.3	98.1	97.7	95.8	95.4	94.4	93.2	93.6	93.9	93.9	94.0	95.1	95.3
		2004	97.3	98.5	100.8	102.9	105.8	..	..	..	..	..	..	..	..
Rolling and drawing of purchased steel															
v3822699	33122	2003	100.9	100.8	100.4	100.2	99.8	99.2	99.3	99.2	99.1	98.9	98.9	99.1	99.7
		2004	102.1	105.4	111.7	114.7	117.0	..	..	..	..	..	..	..	..
Aluminum rolling, drawing, extruding and alloying															
v3822702	331317	2003	96.8	97.6	96.0	94.1	91.9	89.9	93.1	93.1	92.2	91.2	90.4	91.1	93.1
		2004	91.4	94.0	94.4	95.9	95.9	..	..	..	..	..	..	..	..
Non-ferrous metal (except aluminum) smelting and refining															
v3822704	33141	2003	95.8	96.3	94.1	90.8	90.0	89.8	94.2	95.6	97.2	102.1	108.2	115.3	97.5
		2004	121.8	132.9	126.8	127.1	119.0	..	..	..	..	..	..	..	..
Non-ferrous metal (except aluminum) rolling, drawing, extruding and alloying															
v3822705	33142, 33149	2003	95.2	94.7	93.3	90.3	89.8	87.4	89.4	92.0	93.6	91.7	93.3	97.5	92.4
		2004	103.6	108.2	113.5	115.3	108.6	..	..	..	..	..	..	..	..
Ferrous metal foundries															
v3822707	33151	2003	107.2	106.7	105.7	107.2	104.8	103.6	105.3	105.1	104.5	103.3	102.7	103.0	104.9
		2004	102.9	104.1	104.2	105.9	107.0	..	..	..	..	..	..	..	..
Non-ferrous metal foundries															
v3822708	33152	2003	104.2	104.0	102.6	100.8	97.8	96.1	98.2	99.0	98.3	96.3	96.1	96.9	99.2
		2004	97.4	99.8	100.3	101.5	102.5	..	..	..	..	..	..	..	..
Fabricated metal product manufacturing															
v3822709	332	2003	105.8	105.9	105.8	105.4	104.7	104.3	104.6	104.7	104.8	104.6	104.5	104.9	105.0
		2004	106.0	107.3	109.3	110.8	111.5	..	..	..	..	..	..	..	..
Forging and stamping															
v3822710	3321	2003	101.4	101.1	100.8	99.8	99.0	97.9	97.8	97.9	97.8	98.1	98.2	98.0	99.0
		2004	99.8	102.4	106.4	108.2	109.5	..	..	..	..	..	..	..	..
Cutlery and hand tool manufacturing															
v3822711	3322	2003	109.6	109.9	110.3	110.3	110.0	109.9	109.9	109.8	109.8	109.7	109.6	109.6	109.9
		2004	110.2	110.2	110.6	110.8	110.9	..	..	..	..	..	..	..	..
Architectural and structural metals manufacturing															
v3822712	3323	2003	105.4	105.9	105.9	105.6	104.9	104.7	104.8	104.9	105.5	105.1	105.2	106.1	105.3
		2004	108.0	109.7	112.6	115.0	115.6	..	..	..	..	..	..	..	..
Prefabricated metal building and component manufacturing															
v3822714	332311	2003	114.9	114.8	115.0	115.0	115.5	115.5	115.6	115.6	115.7	115.6	115.6	115.7	115.4
		2004	119.0	119.2	119.5	119.9	119.9	..	..	..	..	..	..	..	..
All other plate work and fabricated structural product manufacturing															
v3822715	332314, 332319	2003	100.2	100.5	100.6	99.8	98.4	97.4	97.4	97.8	99.0	98.4	98.7	100.6	99.1
		2004	103.4	106.6	112.1	116.8	117.5	..	..	..	..	..	..	..	..
Boiler, tank and shipping container manufacturing															
v3822717	3324	2003	107.1	107.1	106.9	106.7	106.3	106.2	106.5	106.6	106.4	106.6	106.1	106.9	106.6
		2004	107.4	107.9	108.9	110.3	110.7	..	..	..	..	..	..	..	..

		2004	111.2	111.6	111.5	111.8	111.7	..	..	..	..	..	..	..	..

Note: Indexes for the most recent six months shown are subject to revision.

1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

## STATISTICS CANADA'S ONLINE CATALOGUE OF PRODUCTS AND SERVICES

Whether you're looking for information about the census, health data or recent economic news, Statistics Canada's *Online Catalogue of Products and Services* has the answer to your questions!

Access a variety of data through an **efficient** and **up-to-date** search tool, for work, analyses or personal use.

### A NO NONSENSE SEARCH

Search the *Catalogue* through keywords, expressions, titles, subjects and more!

A thesaurus is available to make your search **easier** and **save you time**.

A link to electronic publications directly downloadable from the Internet!

### RESULTS THAT MEET YOUR EXPECTATIONS!

Access a wide variety of products and services in hard copy or electronic format:

- articles
- surveys
- publications
- CD-ROM
- research documents
- customized aggregated data
- and more!

The information summary of your search results will guide you towards the product or service you require. All the information you need at your fingertips!

Click your way to an extensive source of information and **see for yourself what this online catalogue has to offer!**

# Canada: A Portrait

*Canada: A Portrait* is a handsomely produced book capturing all the beauty and complexity of Canada—its social, economic and cultural life.

Combining spectacular photographs with entertaining and educational text, *Canada: A Portrait* allows us a very rare and human look at the stories behind the numbers—the experiences, issues, art and poetry that bind us together as a nation and a people.

## Every issue includes:

- ▶ durable hard cover format
- ▶ striking dust jacket
- ▶ convenient size: 27.8 cm x 27.2 cm (11 in. x 10 3/4 in.)
- ▶ 6 chapters — 216 pages
- ▶ 80 illustrations
- ▶ detailed index and bibliography
- ▶ separate English and French editions

Treat yourself. Offer it to loved ones. Give it to your friends. Use it to reward colleagues and to thank clients.

**Extensive photographs and thought provoking text make turning every page an adventure!**

## What's Inside

This collector-quality edition depicts the story of a nation in six chapters: The Land, The People, The Society, Arts and Leisure, The Economy and Canada and the World.

Each chapter is prefaced with the voices of authors, poets and other highly accomplished individuals such as John Kenneth Galbraith, Zacharias Kunuk, Nicole Brossard, Gordon Pinsent, Guy Vanderhaeghe and Rick Mercer.

## Ordering and subscription information

This product, Catalogue no. 62-011-XPE, is published monthly as a standard printed publication at a price of CDN \$24.00 per issue and CDN \$233.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$72.00
Other countries	CDN \$ 10.00	CDN \$120.00

This product is also available in electronic format on the Statistics Canada Internet site as Catalogue no. 62-011-XIE at a price of CDN \$19.00 per issue and CDN \$175.00 for a one-year subscription. To obtain single issues or to subscribe, visit our Web site at [www.statcan.ca](http://www.statcan.ca), and select Products and Services.

All prices exclude sales taxes.

The printed version of this publication can be ordered by

- Phone (Canada and United States) 1 800 267-6677
- Fax (Canada and United States) 1 877 287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail Statistics Canada  
Dissemination Division  
Circulation Management  
120 Parkdale Avenue  
Ottawa, Ontario K1A 0T6
- And, in person at the Statistics Canada Reference Centre nearest you, or from authorised agents and bookstores.

When notifying us of a change in your address, please provide both old and new addresses.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136.

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

## Highlights

Manufacturers' prices fell 0.5% in June following an increase of 1.6% in May. On a 12-month basis, prices rose 6.4%, up from the 5.8% registered in May.

From a monthly perspective, lower prices for motor vehicles and other transport equipment (-1.1%) contributed to half of the monthly decrease. This was mainly the result of the effect of the exchange rate. Lumber and other wood products decreased by 3.1% as increased supply resulted in lower prices for softwood lumber (-2.5%), as well as particleboard (-14.2%). Prices for petroleum and coal products declined 1.7% while gasoline and fuel oil prices were down 2.4%.

Lower prices for meat, fish and dairy products (-0.7%), electrical and communication products (-0.6%), as well as chemical products (-0.4%), also contributed to the monthly decrease.

Prices for primary metal products rose 1.9% as supply declined. Higher prices for nickel products (+17.1%) and iron and steel products (+1.6%) were responsible for the major part of this increase.

### Petroleum product prices still influence the IPPI

12-month % change

Price increases were also observed for pulp and paper products (+0.7%) and metal fabricated products (+0.4%).

Compared with June 2003, the Industrial Product Price Index (IPPI) rose 6.4%. The petroleum and coal products group continued to have a strong influence on the 12-month change with an increase of 25.9%. If petroleum and coal product prices had been excluded, the IPPI would have increased 5.1% on a 12-month basis.

Prices for primary metal products were up 22.1% with iron and steel products (+19.2%) as the major contributor to this annual rise. Lumber and other wood products increased 21.9% from a year ago with softwood lumber prices remaining high at 35.0%.

Higher prices for pulp and paper products (+5.8%); metal fabricated products (+8.3%); motor vehicles and other transport equipment (+1.3%); fruit, vegetable and feed products (+3.8%); chemical products (+3.0%); and meat, fish and dairy products (+2.2%) contributed to the 12-month increase in the IPPI.

### Raw materials prices continue to strengthen compared with a year ago

On a monthly basis, raw materials prices were down 1.7% in June, following an increase of 2.8% in May. Mineral fuels were responsible for the most part with a decrease of 3.0%. Crude oil prices declined 3.9% because of increased production.

### Crude oil prices continue to influence the RMPI

12-month % change

Prices for animals and animal products were down 3.6% from May, mainly as the result of lower prices for cattle for slaughter (-9.5%) and fresh fish (-10.4%).

Ferrous materials were up 3.8% as a result of higher prices for iron and steel scrap (+6.9%). Vegetable products increased by 1.0% while prices for soybeans (+4.0%) and canola (+2.1%) rose as a result of tight supply and increased demand. Higher prices were also observed for non-ferrous metals (+0.6%), as well as wood products (+0.4%).

Manufacturers paid 13.8% more for their raw materials compared with one year ago, the second largest increase in

15 months. Mineral fuels were up 15.3% from a year ago with crude oil prices rising 20.1%. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased 12.6%.

Prices for non-ferrous metals rose 36.5% from a year ago, mainly because of higher prices for lead, copper, zinc, nickel, gold and silver. Ferrous materials prices rose 30.2% compared with June 2003 with iron and steel scrap prices rising 43.2%.

Higher prices for wood products (+7.0%), animals and animal products (+4.2%), vegetable products (+7.7%) as well as non-metallic minerals (+2.6%), also contributed to the 12-month increase in the RMPI.

The IPPI (1997=100) stood at 110.6 in June, down from its revised level of 111.1 in May. The RMPI (1997=100) was 126.8 in June, down from its revised level of 129.0 in May.

### Impact of exchange rate

Between May and June, the value of the US dollar weakened against the Canadian dollar with a decrease of 1.5%. As a result, the total IPPI excluding the effect of the exchange rate would have remained unchanged, compared with the actual decrease of 0.5%.

On a 12-month basis, the change in IPPI excluding the effect of the exchange rate was 6.0% from June 2003 to June 2004, compared with the 6.4% actual increase.

### Prices for intermediate goods increase from a year ago

Prices for intermediate goods were down 0.2% from May. Lower prices for lumber products; motor vehicles; petroleum products; meat, fish and dairy products; chemical products; fruit, vegetable and feed products; and electrical and communication products were the major contributors to the decrease.

Higher prices for primary metal products, pulp and paper products, as well as metal fabricated products, partly offset the monthly drop.

Producers of intermediate goods received 9.1% more for their goods in June 2004 than in June 2003. Higher prices for primary metal products; petroleum products; lumber products; pulp and paper products; metal fabricated products; chemical products; and fruit, vegetable and feed products were mainly responsible for the annual increase.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

### Finished goods increase from a year ago

On a monthly basis, prices for finished goods were down 0.7% from May. Lower prices for motor vehicles; petroleum products; electrical and communication products; and meat, fish and dairy products were responsible for this monthly decline.

Higher prices for petroleum products; motor vehicles; fruit, vegetable and feed products; meat, fish and dairy products; electrical and communication products; beverages; furniture and fixtures; machinery and equipment; chemical products; and lumber products pushed the 12-month prices up 2.8% from June 2003.

These increases were partly offset by declining prices for pulp and paper products, non-metallic mineral products, as well as textile products.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies or governments. Much of the remainder are bought by consumers.

### Note to readers

Effective beginning with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the Industrial Product Price Index and Raw Materials Price Index are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point in time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.4% more than it would have been had the monthly average exchange rate been used to calculate the June 2003 index.

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect the prices that the consumers pay. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it (such as the transportation, wholesale, and retail costs). Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-r where

ss indicates the S-level commodity code (from 9 to 28)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details

pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)

rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address [infounit@statcan.ca](mailto:infounit@statcan.ca).

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Reference Document

See reference document in IPPI.

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

# Canada: A Portrait

*Canada: A Portrait* is a handsomely produced book capturing all the beauty and complexity of Canada—its social, economic and cultural life.

Combining spectacular photographs with entertaining and educational text, *Canada: A Portrait* allows us a very rare and human look at the stories behind the numbers—the experiences, issues, art and poetry that bind us together as a nation and a people.

## Every issue includes:

- durable hard cover format
- striking dust jacket
- convenient size: 27.8 cm x 27.2 cm (11 in. x 10 ¾ in.)
- 6 chapters — 216 pages
- 80 illustrations
- detailed index and bibliography
- separate English and French editions

Treat yourself. Offer it to loved ones. Give it to your friends. Use it to reward colleagues and to thank clients.

**Extensive photographs and thought provoking text make turning every page an adventure!**

## What's Inside

This collector-quality edition depicts the story of a nation in six chapters: The Land, The People, The Society, Arts and Leisure, The Economy and Canada and the World.

Each chapter is prefaced with the voices of authors, poets and other highly accomplished individuals such as John Kenneth Galbraith, Zacharias Kunuk, Nicole Brossard, Gordon Pinsent, Guy Vanderhaeghe and Rick Mercer.

**ORDER YOUR COPY TODAY!**

*Canada: A Portrait* (Cat. No. 11-403-XPE): \$49.95

In Canada, please add either GST and applicable PST or HST. No shipping charges for delivery in Canada. For shipments to the United States, please add \$6 per book ordered. For shipments to other countries, please add \$10 per book ordered. Federal government departments and agencies must indicate their IS Organization Code and IS Reference Code on all orders.
